

Circular and Flexible Hybrid Workplaces

## Design and Consume Sustainably!

## FlexWall – locally produced modular and circular design.

*We have long had strict and good demands on ourselves in terms of environmentally friendly materials and surface treatments, and when our eyes were opened to the circular economy a few years ago, we saw our opportunity to put ourselves, and our products, at the forefront.*

*Service, support, upgrades and flexible ways to rent or own the products are just the innermost layers of this uniquely sustainable concept. At its absolute core is the flexibility it means for the user to be able to turn any room into a full-fledged meeting room in just an instant.*

*In order for a product to have as little environmental impact as possible, a modular design is required so that it can be easily upgraded and, if necessary, recycled. FlexWall is based on our patented\* solution that allows just this.*

*FlexWall is a concept for sustainability that is far, far greater than the product and that means a lot to your entire property and business.*

\* Patent EP-SE-21045799

## FlexWall Mobile Presentation

---

### FlexWall Mobile Presentation

---

Width: 1700mm, Height: 1940mm, Depth: 630mm.

#### Technical supplements

In order to get a complete function, you may need complementary products such as display, video bar and connection technology. If you do not have existing products, we will be happy to help you with advice.

The dark standard fabric is Kvadrat Basel 181 and the light standard fabric is Kvadrat Steelcut Trio 3 0205.

Black / Dark standard fabric	42000

Custom Shop	42030

---

### Work at the forefront

With our latest addition to mobile AV furnishing solutions, FlexWall Mobile Presentation, you can easily upgrade the technology at any time. If there's anything we've learned from the last few years, it's that technological development happens very quickly.

### Up to 70"

Stylish and neat, with hidden cords. Room for a 70" display (max width 1607mm), or smaller, and a shelf for your video bar. Universal bracket for the display is included. It is easy to remove the back cover for

installation of any wireless device, computer or whatever technology tomorrow will bring. Supplied in a flat package with assembly instructions.

## FlexWall Mobile Shelves

---

### FlexWall Mobile Shelves

---

Width: 1700mm, Height: 1940mm, Depth: 630mm.

---

### Shelves for display and storage

We have created an open, mobile shelf (with three shelves included in the starter package) for the plants, binders or anything else that is important for your unique environment or business.

The dimensions of the shelves are 1609x303x30mm.

### Flexible and stable

The shelves are made of powder-coated steel and can be placed steplessly in height using vertical tracks on the inside of the the aluminum gables. You basically decide yourself how much stuff the shelves should hold.

## FlexWall Mobile Rack

---

### Mobile wardrobe

Open wardrobe, clothes rack, garment rack, coat stand or FlexWall Mobile Rack. Call it what you will.

Two shelves and a clothes rail are included as standard. You can place the shelves and the bar steplessly in height to suit your needs.

### Storage with benefits

The advantages of an open solution are, of course, that it is easy for your guests to get rid of, and then find, their outerwear again. In addition, the garments are aired during the visit and more comfortable to wear.

Stylish, practical and easy-to-clean model where it is easy to see if something has been left behind.

## FlexWall Mobile Whiteboard

### Better Whiteboards

With double glass-enamel whiteboards of the highest quality and with fabric-covered panels underneath, the FlexWall Mobile Whiteboard contributes to more creativity, better acoustics and greater well-being. The whiteboards are tested and approved according to SS-EN14434 (Whiteboards for educational environments - Ergonomics, technology and safety) to level 2.

This means that they meet significantly stricter requirements than other whiteboards on the market. For you, this means that they are objectively better and more durable than other whiteboards, and that

can't be wrong.

## FlexWall Mobile Acoustic

### The acoustics are just as important as the lighting

The brain is good at compensating for poor acoustics in a room. But the extra work has a cost in the form of you getting tired faster.

Remote meeting participants does not have the same possibility, and an unclear sound captured with a microphone and reproduced through the remote participant's speaker can become unbearable after a while.

The easiest and best solution is to correct the

acoustics from the very beginning, and that is what this product does.

FlexWall Mobile Acoustic works according to the principle of absorption and is constructed in the same way as sound absorbers in professional recording studios. It is filled with mineral wool and one side is perforated with many small holes. This construction allows it to effectively absorb frequencies between 200-3000 Hz. It is in this range the sound from airplanes, vacuum cleaners and most of human speech and hearing are found.

### Also as a wall mount

FlexWall Acoustic is the wall-mounted version of FlexWall Mobile Acoustic. It is built in the height and width that you want. It can also be manufactured without holes and will then be more effective at capturing and neutralizing duller frequencies such as that from factory machinery, traffic noise and engines.

*FlexWall Acoustic is available with black or white aluminum profiles and can be covered with any fabric. We can also drill any board material in a pattern that you have designed yourself.*

## FlexWall Presentation

### Always in place

FlexWall Presentation is based on the same modular platform as FlexWall Mobile Presentation, but is instead fixed against a wall. In this model, it is the front under the shelf that is removable and it is in that space that you hide away all the meeting room technology that does not need to be seen.

### Smart and practical

Stylish and neat, with hidden cords. Space for up to 70" display (max width 1607mm) and shelf for video bar. Universal bracket for display included. Available in several standard variants but can also be built completely to your specification in our Custom Shop.

### FlexWall Presentation

Bredd: 1700mm, Höjd: 1960mm, Djup: 215mm.

#### Technical supplements

In order to get a complete function, you may need complementary products such as display, video bar and connection technology. If you do not have existing products, we will be happy to help you with advice.

FlexTable	49899
-----------	-------

---

### Share your Tabletop

Humanity has a very long experience of cooperation over a distance. Our need to communicate and collaborate with each other has been the driving force behind several technological revolutions.

Having video meetings between different workplaces and home has recently become commonplace for many employees. Sharing presentations and what you have on your computer desktop is easy and simple, but sharing your physical tabletop has not been solved in a really good way until now with FlexTable.

Whether FlexTable is a revolution or a breakthrough, we cannot tell, but with web meetings and connected tables, organizations can now also share practical knowledge all over the world.

Everything from the cutting of cloth for clothing, the composition and arrangement of dishes and the artisanal production of teacups can be taught, documented and standardized in real time in international or educational organizations.

Suitable display sizes are up to 49".

## FlexPanel

### Protect and hide the technology

FlexPanel is the perfect complement to installations where there already is a display and a camera on the wall. It is perfectly adapted to all those occasions when the lower edge of the display should be between 800-1000mm from the floor.

It stands directly on the floor on adjustable feet and is secured to the wall with a couple of screws. If you want, you can opt out of the feet and attach your entire FlexPanel to the wall instead. You are then to place it anywhere.

On the top there is a removable and ventilated shelf with an opening for cable routing. When you have

removed the shelf, you can open the front. If you wish, you can fix the shelf with screws to protect the contents from unauthorized access.

### Place for video bar

On the shelf you can place a video bar, an MTR solution or a PTZ camera. If you do this, turn the cable duct so that its front opening faces downwards. You can then run the camera's cables through the channel down to your FlexPanel. If you don't have a camera or video bar, or want to mount it above the display, instead place the cable duct so that its front opening

is hidden behind the display. Then the cable channel hides the opening in the shelf and the cable to your video bar.

### FlexPanel

Width: 1008mm, Height: 780mm, Depth: 124mm. The length of the cable duct is 300mm.

#### Technical supplements

In order to get a complete function, you may need complementary products such as display, video bar and connection technology. If you do not have existing products, we will be happy to help you with advice.

The dark standard fabric is Kvadrat Basel 181 and the light standard fabric is Kvadrat Steelcut Trio 3 0205.

# FlexPanel

Black sides and metal details. Front panel covered with Kvadrat Basel 181.

Black sides and metal details. Front panel with acoustic panel with black oak slats.

Black sides and metal details. Front panel with acoustic panel with light oak slats.

White sides and metal details. Front panel covered with Kvadrat Steelcut Trio 3 0205.

As all technicians know, it is behind the nice fronts that all the technical stuff must be installed and organized. It's usually a computer, a switch, a few power adapters, a hub, some AV technology and something else amazing that surely the future will bring.

Often together with many meters of cable of various kinds. In order for it to be operationally reliable and easy to service, it is necessary that the installation space is available and that it is smartly designed for everything that we want to avoid seeing, but still need. That space is inside the FlexPanel.

## MeetingFrame Basic Custom Shop

### MeetingFrame Basic Custom Shop

Depth: 124mm.

The total width of the product will be approximately 43 mm wider than the display you want mounted in. The height will be approximately 200 mm higher than the height of the display. Specify your video bar model when ordering.

#### Technical supplements

In order to get a complete function, you may need complementary products such as display, video bar and connection technology. If you do not have existing products, we will be happy to help you with advice.

The dark standard fabric is Kvadrat Basel 181 and the light standard fabric is Kvadrat Steelcut Trio 3 0205.

Black / Dark standard fabric	49150
White / Light standard fabric	49151
Black / Special fabric	49152
White / Special fabric	49153

### Stylish and reliable

MeetingFrame Basic protects the technology in your installation. Just the fact that no more cables get pulled out and no more small adapters disappears makes it more reliable.

Behind the panel you put a media player, a small PC, a thin client and/or a receiver for wireless audio and image transmission.

MeetingFrame is therefore perfect both for modernizing and beautifying rooms that today have a display and ductwork on the wall and for converting an ordinary room with a power outlet into a full-

fledged meeting room.

If you want to, we can fit your camera or video bar into the fabric-covered board under the display. But since this means that the camera often comes a little too low for a normal meeting room, the most common solution is to mount the camera on the wall above the MeetingFrame Basic.

Specify video bar model and display when ordering. Suitable display sizes are 43"-85". Video bar and display are not included in the MeetingFrame Basic Custom Shop.

## MeetingFrame Classic Custom Shop

### MeetingFrame Classic Custom Shop

Depth: 124mm.

The total width of the product will be approximately 43 mm wider than the display you want mounted in. The height will be approximately 420 mm higher than the height of the display.

If you want to supplement your MeetingFrame Classic with Whiteboard modules, see page 15, we will build them to fit your MeetingFrame in height. In width, they will be the same size as your MeetingFrame, or smaller, depending on your requirements.

#### Technical supplements

In order to get a complete function, you may need complementary products such as display, video bar and connection technology. If you do not have existing products, we will be happy to help you with advice.

### Technology meets interior design

MeetingFrame Classic Custom Shop is both stylish and smart and a combination of modern technology and traditional craftsmanship.

Behind the panel you put a media player, a small PC, a thin client and/or a receiver for wireless audio and image transmission.

MeetingFrame is therefore perfect both for modernizing and beautifying rooms that today have a display and ductwork on the wall and for converting an ordinary room with a power outlet into a full-fledged meeting room.

In its standard version, the MeetingFrame Classic Custom Shop is available for almost all video bars and cameras on the market. We fix these into the fabric-covered board above the display. It is a location that suits in most professional meeting rooms. Some PTZ cameras are not suitable for flush-mounting, but they can be placed on the MeetingFrame's top plate or attached to the wall above.

Specify video bar model and display when ordering. Video bar and display are not included in the MeetingFrame Classic Custom Shop.

## MeetingFrame X-Line Custom Shop

### MeetingFrame X-Line Custom Shop

Depth: 124mm.

The total width of the product will be approximately 43 mm wider than the display you want mounted in. The height will be approximately 420 mm higher than the height of the display.

If you want to supplement your MeetingFrame Classic with Whiteboard modules, see page 15, we will build them to fit your MeetingFrame in height. In width, they will be the same size as your MeetingFrame, or smaller, depending on your requirements.

Some PTZ cameras are not suitable for flush-mounting, but they can be placed on the MeetingFrame's top plate or attached to the wall above.

Specify video bar model and display when ordering. Video bar and display are not included in the MeetingFrame Classic Custom Shop.

Hatch in the front for controlled access.

## MeetingFrame X-Line Custom Shop with Whiteboard modules

Combination with MeetingFrame X-Line Custom Shop with 75" display, Poly Studio Videobar and two whiteboard modules.

## MeetingPanel Max

for Logitech MeetUp, display  $\geq 55''$

### For smaller meeting rooms

Our popular classic MeetingPanel has now developed into the MeetingPanel Max. This means that it is now available in two models and can therefore also be used for displays that are 55" and larger.

We have prepared twelve variants with precisely adapted holes in the cloth-covered panel for two different video bars and in different colors / materials.

Everything is simply hung on the wall, connected to the power socket, and you have a ready-made meeting room.

The model for displays that are 55" and larger comes with a separate display bracket that hangs on an aluminum strip. MeetingPanel Max is hung on its own aluminum strip underneath. The cables between the display and the technology behind the MeetingPanel Max are simply dropped into the space in between and are not visible from the front.

On the model for displays smaller than 55", the display is mounted on the built-in bracket on the MeetingPanel Max and everything is hung on one and the same strip.

### MeetingPanel Max

## *Mobile and MeetingWall - The Swedish-made original for displays of all sizes.*

The products Mobile and MeetingWall are both available in the Basic and X-Line models.

### **X-Line**

The X-Line model has a Connecto shelf on the front in which there are sockets and storage space for connection cables, manuals, remote controls and other small things. You can also place a computer, MTR panel or camera on the Connecto shelf.

### **Basic**

Mobile Basic and MeetingWall Basic are without Connect shelf and are designed for those who want to place a small computer, with wireless keyboard and mouse, inside the furniture or use the display's wireless connection. As an accessory to the Basic models, there is a connection for HDMI (signal to display) and USB (signal from video bar) for those who still want to be able to connect their computer with cables.

### **Color and upholstery**

In the standard product range, Mobile and MeetingWall are available with black or white aluminum profiles, leg arches and wheels, as well as with our dark and light standard fabrics from Kvadrat. There are also other covers and surfaces to choose from, which you can see next to each product on the pages ahead.

### **From our Custom Shop**

Many of the products on the following pages come from our Custom Shop. This means that they are built to fit your technology and to your specifications.

In order to get a complete function, you may need complementary products such as display, video bar and connection technology. If you do not have existing products, we will be happy to help you with advice.

## The design options

There are three design options. It is the size of the display that determines which design options are available. Below we have some examples with Mobile X-Line to explain the principle. The examples are adapted to the Sony BZ40 display in a few different sizes, but of course we build your furniture to fit the displays you have chosen. In general, a Mobile is

1940mm high and a MeetingWall is 1960mm high. The connecto shelf is placed, as far as possible depending on the size of the display, on a Mobile X-Line at the standard height of 730mm from the floor. On a MeetingWall X-Line, the corresponding standard height is 750mm from the floor.

The camera, or video bar, is placed, as far as possible depending on the size of the display, at a height of at least 900mm from the floor. If the camera comes below that height, the design option is called "Lounge" because it fits best if you sit on sofas, armchairs or open spaces.

For display sizes larger than 75", the video bar is placed in a separate board above the display. This design option is called "Executive" and it's a safe bet in traditional meeting rooms where you sit upright.

*Mobile X-Line Standard for Sony BZ40 55"*

*Mobile X-Line Standard for Sony BZ40 65"*

*Mobile X-Line Lounge for Sony BZ40 75"*

*Mobile X-Line Executive for Sony BZ40 65"*

*Mobile X-Line Executive for Sony BZ40 75"*

## Mobile Basic Custom Shop

### AV integrated on arrival

The Mobile Basic Custom shop is built by us so that it fits exactly with the display you have chosen. If the display is approximately 80mm or deeper, it will stick out the corresponding depth in the front. If you are careful that it is in level with the fabric-covered front, then you consider this when choosing a display.

On the back, it has the world's best magnetic glass enamel whiteboard. Just below the writing board, we can mount a socket with an HDMI and a USB connection that is available as an accessory. If you choose one of the variants with fabric, the

lower panel on the back is also covered with the same fabric. If you choose a variant with an acoustic panel, the lower part of the back is equipped with a writing surface.

The depth of the entire product is only 630mm, so it hardly takes up any space in the room, and you don't have to trip over any protruding details, which is an important aspect of accessibility.

### Save time and money

Normally we need two weeks to manufacture your

Mobile Basic Custom Shop and deliver it to you. If you choose a fabric that is not part of the standard range, the time it takes to get the fabric delivered to us will be added.

When you compare this to the time it takes to specify, procure and implement a traditional meeting room remodeling, there is a clear advantage to installation-free solutions like the Mobile Basic Custom Shop.

The same applies to the financial calculation. The price for the entire finished product is often less than what it costs to just let the craftsmen set up their

### Mobile Basic Custom Shop

Height: 1940mm, Depth: 630mm. The total width of the product will be approximately 43 mm wider than the display you want to use.

#### Technical supplements

In order to get a complete function, you may need complementary products such as display, video bar and connection technology. If you do not have existing products, we will be happy to help you with advice.

The dark standard fabric is Kvadrat Basel 181 and the light standard fabric is Kvadrat Steelcut Trio 3 0205. Models with an acoustic panel front have a writing board on both the upper and lower section of the back.

---

### Even more flexibility

Mobile X-Line, like most of the products in our installation-free range, is based on one of our unique patents that allows you to manufacture stronger furniture with lighter weight.

It has all the advantages and features of the more basic Mobile Basic Custom Shop model, but it is seasoned with additional finesse.

All technology is neatly hidden inside the furniture and in its Connecto shelf on the front beneath the display. In it, you can store cables, manuals, remote

controls and other things. You will also find all the connections there.

If you choose a variant with fabric, the lower panel on the back is also covered with fabric. A variant with an acoustic panel, the lower part of the back is equipped with a writing surface.

### The right thing in the right place

Because the Mobile X-Line Custom Shop is equipped with proper wheels, several people in the organization can easily share it wherever it is needed on the premises. It passes through all doorways and even the

really large models, up to 85", easily enters modern elevators with stretcher dimensions.

Your Mobile X-Line Custom Shop can therefore be at the board meeting at 08:00, the product launch at 12:00 and the training at 15:00.

In between, it can stand beside the reception desk and welcome your visitors or be an open portal to a similar Mobile X-Line Custom Shop at the embassy in Washington, in the University's auditorium, in a courtroom downtown or on the stage of the Royal Opera House.

## MeetingWall Basic Custom Shop

### Always ready

The MeetingWall Basic Custom Shop is based on the same platform as the corresponding Mobile Basic Custom Shop, but instead of standing on wheels, and having a writing board on the back, the MeetingWall Basic Custom Shop is placed on the floor and secured directly to the wall.

The adjustable feet allow you to adjust it horizontally level above the skirting board so you don't have to damage it.

MeetingWall Basic Custom Shop is preferable to the mobile variants when you want a fixed solution that you know will be in the same place every day.

### Extra safe and user-friendly

The more closed Basic design makes it suitable for more public premises as your visitors, users or students cannot easily access any connections, buttons or contacts.

This makes MeetingWall Basic Custom Shop perfectly suited for wireless connection technology.

Perhaps together with a set consisting of a wireless keyboard and mouse kept in the reception or, for guests with computers, a wireless HDMI connection kept in the same reception.

MeetingWall Basic Custom Shop can be combined with matching whiteboard modules that can be placed

next to it. Which kind of combination suits your particular business and way of working is of course up to you.

We think we've seen all the variants, but feel free to challenge us on that point.

MeetingWall Basic Custom Shop makes it possible for you to have a representative, secure, easy-to-clean and ready-made meeting-training and crisis management room in place just a couple of weeks after you pick up the phone and call us.

### MeetingWall Basic Custom Shop

Height: 1960mm, Depth: 124mm. The total width of the product will be approximately 43 mm wider than the display you want mounted in.

## MeetingWall X-Line Custom Shop

### Accessible and customizable

The same product as MeetingWall Basic but also equipped with a Connect shelf for those of you who want more accessibility. Under the lids on the shelf, there is room for connections, cables, mobile chargers, hubs and other accessories. On top of the shelf, there is room for, for example, PTZ cameras, computers and touch screens used for MTR's (Microsoft Teams Room Systems).

In the illustration above, the MeetingWall X-Line is surrounded by two additional whiteboard modules to form a complete AV wall solution. Of course, the

whiteboard modules also fit perfectly together with a MeetingWall Basic Custom Shop, or completely by themselves. The design options (the placement of your Videobar) are the same as for the Mobile.

Specify which display you have, or want to have, and we will build your MeetingWall X-Line Custom Shop so that it fits your display exactly.

### A Location for Information

Mobile Signage allows you to display effective and smart slideshows, movies and advertisements in public spaces. The portrait-oriented format allows you to use the same image material that you often use in newspaper ads, posters, on the website, Instagram or Facebook.

Another common application is digital maps that help visitors find their way around your premises. You can get your Mobile Signage with or without wheels. The back is equipped with a magnetic writing board for your analogue messages

### All on the same wall

For those who want to keep the traditional whiteboard with all its advantages but at the same time have access to work the modern tools that are available today, the Custom Shop Hybrid Whiteboard with recessed display and video bar just might be the right choice.

The Hybrid Whiteboard can be equipped with any display and video bar. With displays in sizes up to 60", the whiteboard is 120 cm high, in sizes from 61" to 75", the whiteboard is 150 cm high. You choose whether you want your video bar, or camera, above or below the display. Specify when ordering.

## FlexWall Conference

2x1000x1200	42869
2x1200x1500	42870
2x1500x1500	42874
Custom cutting service, per cut	41900

### Economy and ergonomy

FlexWall Conference was originally developed as a solution for crisis management rooms and allows you to have both whiteboards and a very large monitor right in front of you.

The advantage of FlexWall Conference is that the whiteboards can be pushed together so that the display is not visible, and pushed apart when the camera and display are to be used. The whiteboards are very easy to maneuver as they hang on our very finest DesignLine carrier strip with our ball-bearing super wheels.

A smart, cost-effective and stylish solution for a very large display combined with a very large writing surface.

FlexWall Conference enables your communication equipment to be hung exactly where you want along all the walls of the room where you can easily visually reach it at any moment.

FlexWall Conference is available in three models with whiteboards 2x1000x1200mm, 2x1200x1500mm and 2x1500x1500mm.

If you want the writing boards in your own size, there is an additional custom cutting service to order.

Add a cap allowance for each cut you need. Hanging fittings for screen mount, detachment protection, wheels and wheel cassette as well as carrier strip are included.

## Plan for success

Here's how to plan so you order your FlexWall Conference in the right size:

In the drawing above, you can place your measurements.

$H$  is the height of the whiteboard panels. They are available in heights of 1200 or 1500mm but can be obtained in another height with the Custom cutting service. The active height, where you can place things on the wall, is that between the bottom of the AV strip and the top of the support feet. It is 150mm less than the height of the whiteboard panels. If you choose whiteboard panels that are 1200mm high,

then a display and a video bar can fit on the wall behind as long as their combined height is less than 1050mm.

$B$  is the width of the whiteboard panels. They are available in widths of 1000, 1200 and 1500mm, but can be obtained in another width with the Custom cutting service.

In order for two whiteboards to hide a display completely, they will need to be wider together than the display. In order for the whiteboards to be pushed away so far that the entire display is visible ( $S$ ), the wall ( $V$ ) where everything is to be mounted needs

to be at least as wide as the combined width of the display and whiteboards. The AV strip ( $L$ ) can be 220mm shorter than the total width of the wall or, 110mm shorter than the length you want to limit the total stroke length to on either side.

The active depth ( $A$ ), the measurement between the wall and the inside of the fittings that hold the whiteboard panels, is 130mm.

Between the wall and the inside of the whiteboard panels there is another 30mm.

This means that basically every modern display and video bar on the market can fit behind the boards. But if needed, the fittings are adjustable in depth up to

182mm, active measurement.

Bottom line: Check the overall height and depth of what you want to hide behind the whiteboard panels. Choose whether you want 1200 or 1500mm high whiteboards or a custom cut. Remember that 150mm of the height is reserved for hardware.

Check the width of what you want to hide behind the whiteboard panels and choose whiteboard panels that are more than half that size.

Make sure there is enough space on the sides for the boards to fit when pushed apart and away from the display.
